Business Plan: Streat – Street Food Pickup Web Application

Business Name: Streat

Business Model: Online Ordering & Pickup Only
Target Users: Urban food lovers, office workers, students, and commuters
Problem Solved: Reduces wait time, streamlines street food ordering.
Solution: A user-friendly web application that allows users to order online, and pick up food at a scheduled time—without waiting in line or eating on-site.

Business Description
Streat offers a "click-and-collect" system where users can:

Order food online

Choose a pickup time

Pay digitally

Collect their meal with minimal contact and no dine-in

Project Description:
Users can order food and put their contact information in the orders form. Admin(staff) can login to see the order information and prepare the order, then mark it as done.
